Acme AI

Acme AI

The reasoning layer for logistics

Series A · October 2026

www.acme-ai.example

THE PROBLEM

Warehouses still run on spreadsheets, radio calls and gut feel.

01

Plans break by 10am

A late truck or a no-show shift ripples through every dock, and the morning plan is out of date before lunch.

02

Decisions live in people's heads

Supervisors re-plan by hand across the WMS, the TMS and a whiteboard. Nothing is written down, so nothing improves.

03

Software follows rules, not reasons

Today's tools optimise one step at a time. None of them can weigh a late truck against a labour shortage against a promised ship date.

A TYPICAL DAY ON THE FLOOR

06:00
Plan built in a spreadsheet

09:40
Inbound truck late

10:15
Re-plan over the radio

14:00
Overtime called

18:30
Orders miss the carrier cutoff

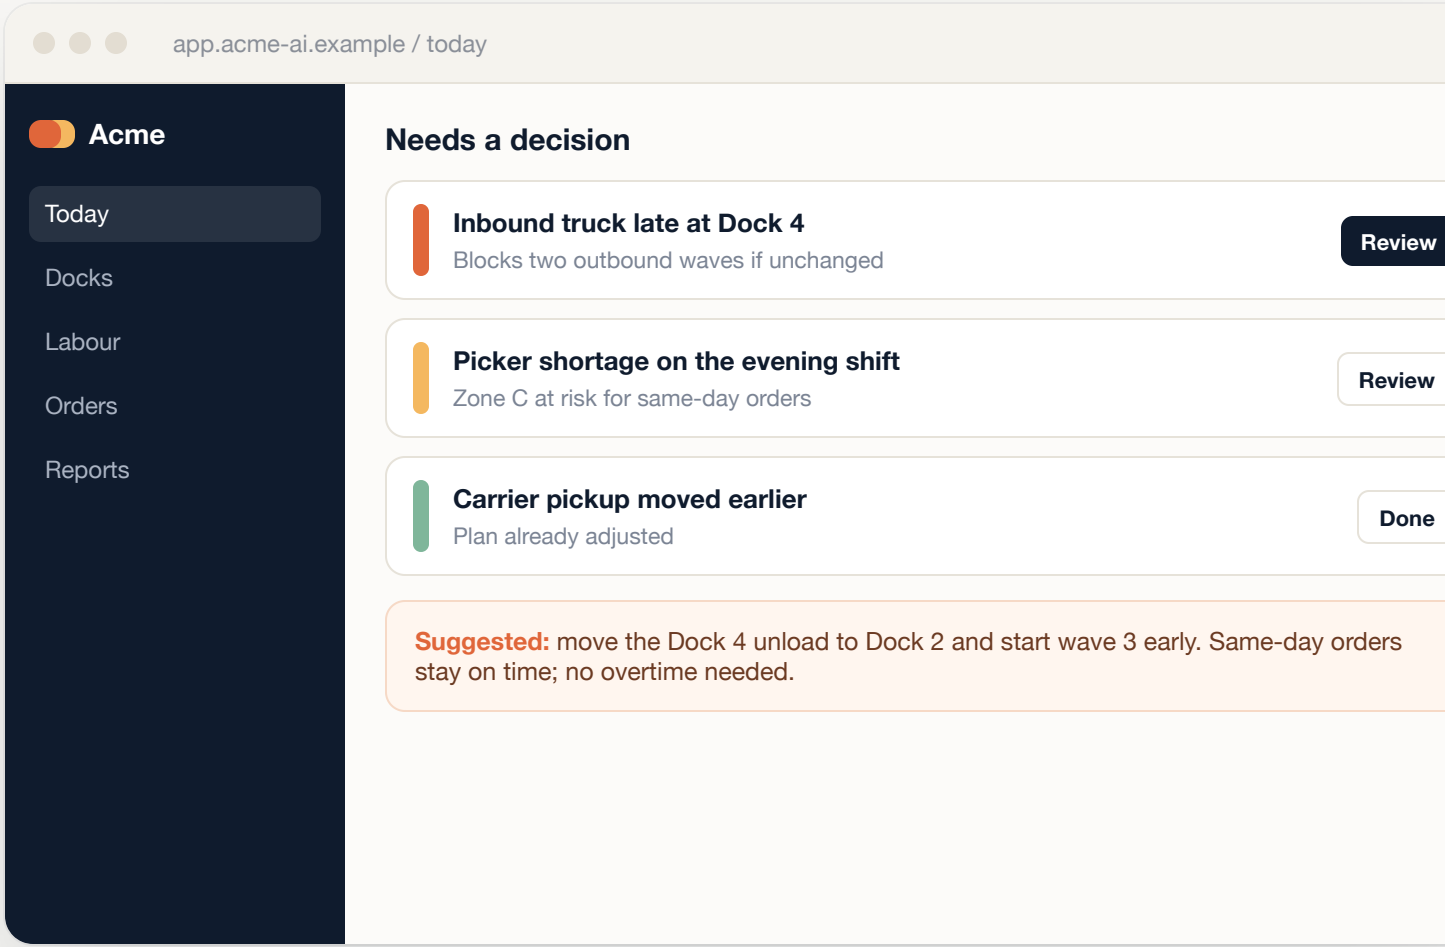

THE PRODUCT

An AI planner that reasons over every order, dock and shift.

Acme watches the floor in real time, explains what is about to go wrong, and proposes the fix. A supervisor approves it in one click.

Live exceptions **Re-slotting** **Labour plans**

Plain-English reasons

HOW IT WORKS

Plugs into the systems a warehouse already has. Live in weeks, not quarters.

CONNECT

Read every system

WMS, TMS, labour scheduling and yard data, through standard connectors.

WMS · TMS · ERP · Scheduling

REASON

Model the whole floor

A reasoning model weighs trucks, people and promises together, and says why.

ACT

One-click fixes

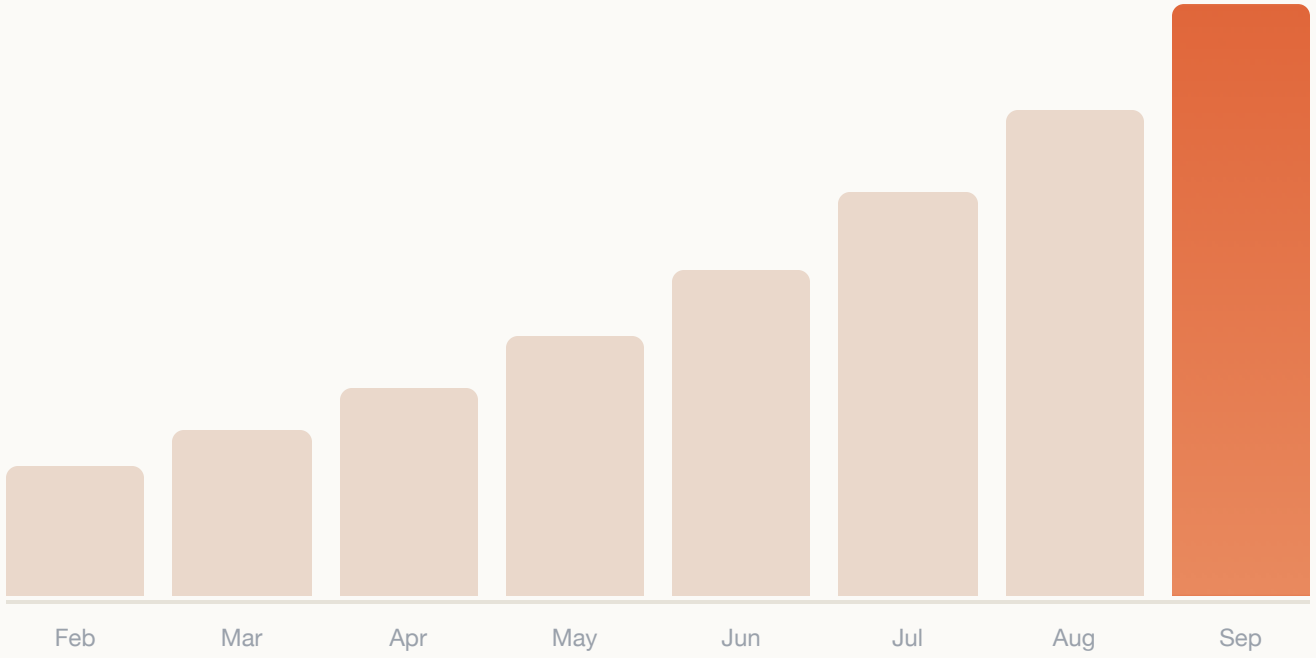

Approved plans write straight back to the WMS and the team's handhelds.

TRACTION

$3.1M

$3.1M ARR, growing 20% MoM.

Every customer started with one site and expanded.

ARR by month, 2026

CUSTOMERS

Trusted by Globex and Hooli. Signed LOI with Initech.

WHY NOW

Reasoning models finally make the floor computable.

Models can explain

Supervisors act on a plan they understand. Black-box optimisers never earned that trust.

Data is finally there

Handhelds, yard cameras and cloud WMSs stream the events a planner needs, in real time.

Labour is the constraint

Operators can't hire their way out. They have to plan their way out.

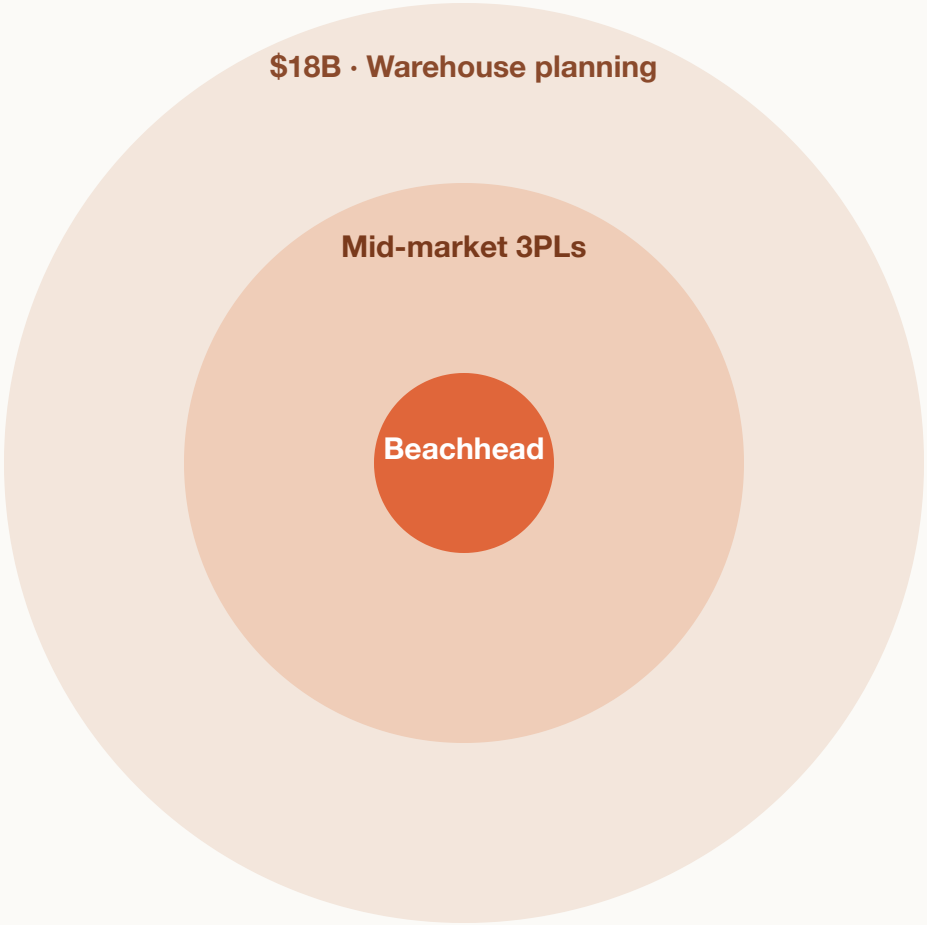

Rules engines	Optimisers	Reasoning models
If-this-then-that, set up once by consultants	Fast, but a black box nobody on the floor trusts	Weigh trade-offs and explain them in plain English

MARKET

Every warehouse needs a planner. Most still don't have one.

We start with mid-market third-party logistics operators running several sites, then move up to enterprise retail and down to single-site operators with a self-serve plan.

Market size is our own estimate of annual spend on warehouse planning software and the planning labour it replaces.

BUSINESS MODEL

A platform fee plus a licence per site. Customers grow by adding warehouses.

LAND

One site

A paid pilot on the customer's busiest building, live in weeks.

EXPAND

Every site

Each new warehouse adds a site licence. Globex added its second warehouse this year.

EXTEND

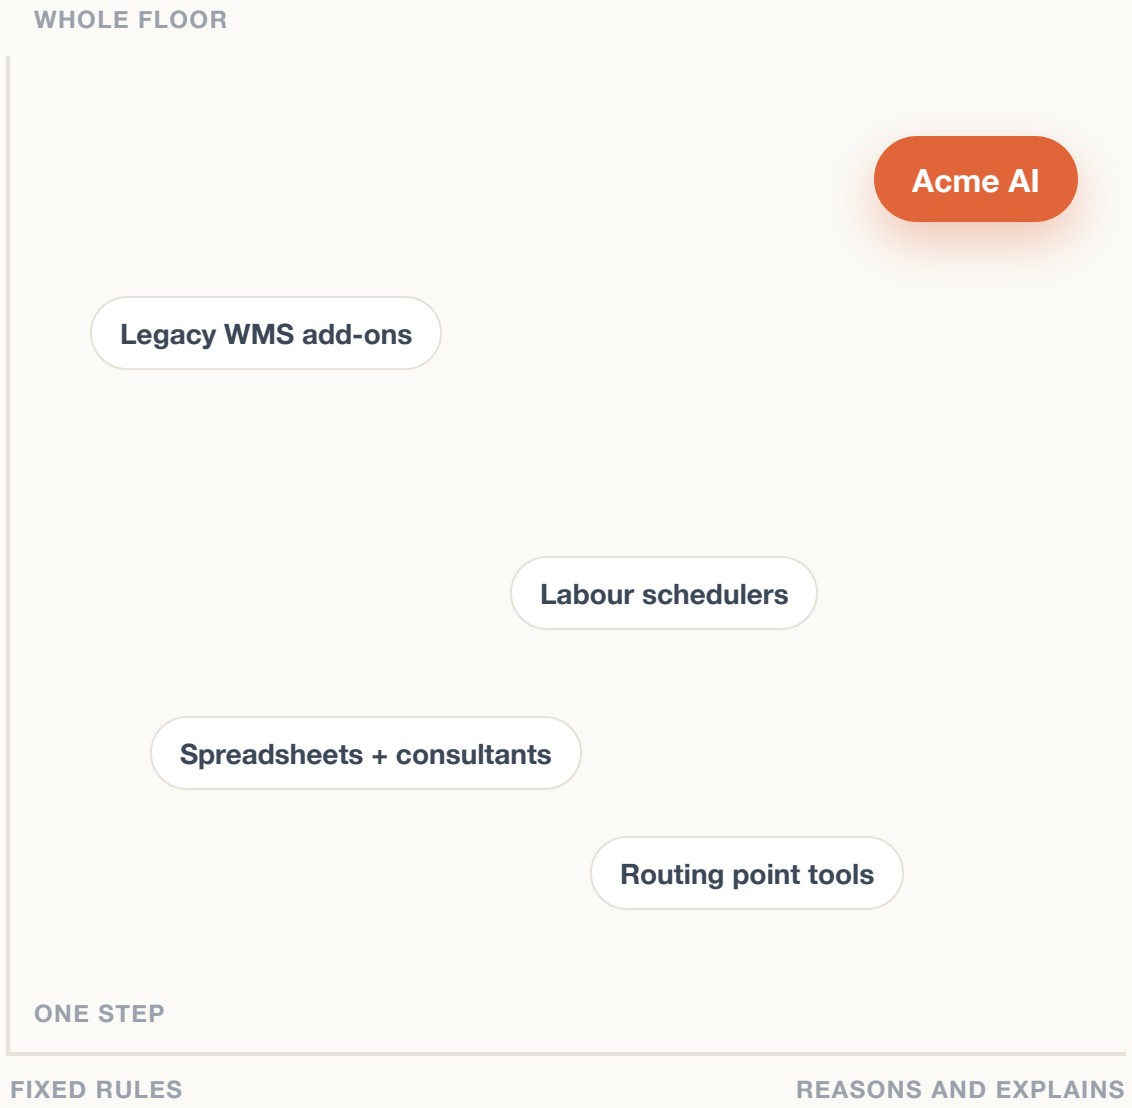

New modules

Labour planning and yard management sold into the same account.

COMPETITION

Others optimise a step. We reason across the whole floor.

Legacy WMS add-ons are rule-based and slow to change. Point tools solve routing or labour on their own. Consultants and spreadsheets don't run in real time.

TEAM

A team of 25 AI engineers in San Francisco, plus 6 contractors in Lisbon.

JF

Jane Founder
CEO · ran operations at a regional 3PL

TS

Tomás Silva
CTO · built planning systems for fleets

MC

Mei Chen
Head of Product · supply chain software

25
AI engineers · San Francisco

6
Contractors · Lisbon

Hiring
Aggressively, across engineering and GTM

BOARD AND ADVISORS

Board: Jane Founder (CEO), Sam Investor (Example Ventures). Advisors: Dr. Ada Smart.

JF

Jane Founder

CEO · Board

Ran operations for a regional third-party logistics operator before starting Acme. Leads product and sales.

SI

Sam Investor

Example Ventures · Board

Partner at Example Ventures, which led the seed. Focuses on supply chain and industrial software.

AS

Dr. Ada Smart

Advisor

Professor of operations research. Advises on planning models and how we evaluate them.

THE ASK

Raising a $25M Series A to take Acme from a few sites to every site.

USE OF FUNDS

FINANCING TO DATE

$12M raised to date: $2M pre-seed (2025) and a $10M seed led by Example Ventures (June 2026).

WHAT THIS ROUND BUYS

Enterprise
First enterprise retail customers

Labour module
Generally available to every site

Europe
Customer success hub in Lisbon

Series B
Ready on every metric that matters
